Military Must Clean Up PFAS to State Rules, House Panel Says

Pennsylvania Clears Big Hurdle to Joining Regional Climate Pact

Latest Stories

ECB Warns Banks of Climate-Test Risks That Could Hit Capital (1)

The European Central Bank is stepping up pressure on lenders to prepare for stress tests next year that will show just how vulnerable the industry is to climate change, according to people familiar with the process.

Pennsylvania Clears Big Hurdle to Joining Regional Climate Pact

A Pennsylvania regulatory review board on Wednesday approved the state's bid to join a carbon trading program among a group of mostly northeastern states, clearing the last major hurdle before joining in the first quarter of 2022.

VW Urges U.S. High Court to Review Ohio Ruling on Diesel Lawsuit

The Clean Air Act blocks Ohio from suing to impose a \$350 million-per-day fine over Volkswagen AG's diesel emissions software, contrary to a ruling of the state's top court, VW and related companies told the U.S. Supreme Court in a petition for review.

Highly cited 1985 article

Reforming Environmental Law⁴¹

In 1971, Ezra Mishan brilliantly satirized the views of a Dr. Pangloss, who argued that a world of largely unregulated pollution was 'optimal' because cleanup would involve enormous transaction costs. ¹ Less than 15 years later, Professor Latin uses the same Panglossian argument to rationalize the current regulatory status quo. ² He not only accepts but endorses our extraordinarily crude, costly, litigious and counterproductive system of technology-based environmental controls. Like Mishan's Pangloss, he seems to believe that if it were possible to have a better world, it would exist. Since it does not, the transaction costs involved in regulatory improvement must exceed the benefits. Proposals for basic change accordingly are dismissed as naive utopianism.

What explains this celebration of the regulatory status quo? As critics of the present system, we believe this question to be of more than academic interest. The present regulatory system wastes tens of billions of dollars every year, misdirects resources, stifles innovation, and spawns massive and often counterproductive litigation. There is a variety of fundamental but practical changes that could be made to improve its environmental and economic performance. Why have such changes not been adopted? Powerful organized interests have a vested stake in the *1334 status quo. The congressional committees, government bureaucracies, and industry and environmental groups that have helped to shape the present system want to see it perpetuated. ³ But the current system is also bolstered by an often inarticulate sense that, however cumbersome, it 'works,' and that complexity and limited information make major improvements infeasible.
